HIGH-POWERED 8 BAND DESKTOP JAMMER

The B68L jammer is a desktop jammer for mobile phones up to 4G. Furthermore, it is able to kill 2.4GHz WiFi frequencies, GPS L1 and LoJack.

Ideally designed to shield meeting rooms or conference rooms, cell phones and bugs using the above-mentioned frequencies will be rendered useless. The B68L can be defined as the more popular variation of the B68C and B68H models, as it includes the most used tracking and espionage frequencies. It is equipped with output power adjusting knobs at the base of each antenna.

Used alongside its twin B68H, these two jammers offer a complete jamming experience by disrupting all mobile frequencies up to 4G, 2.4GHz WiFi and 5.1-5.8GHz.
